Atharva Kirkole

Java Full Stack Developer

atharvakirkole07@gmail.com | +91 9130801794 | LinkedIn URL | GitHub Link

PROFESSIONAL SUMMARY

Java Full Stack Developer with 1.9 years of total experience building backend services (**Spring Boot, Java, Hibernate**) and frontend applications (**React JS, Angular**) for enterprise ERP systems. Skilled in microservices, event-driven architecture with **Apache Kafka**, with delivered impact including a 60% build-time reduction and a 25% database query optimization. Applies **AI-assisted engineering workflows** (Claude, GitHub Copilot) to speed up development, debugging and sprint analysis

TECHNICAL SKILLS

Languages & Concepts: Java 8, Java 17, Java 21

Backend Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate

Frontend: React JS, Angular, JavaScript, Material UI, Html, CSS

Database Cache & Messaging: Apache Kafka, Redis, SQL, PostgreSQL, Oracle

Cloud & DevOps: AWS (EC2, S3, RDS, OpenSearch), Docker, GitLab CI/CD, Maven, Git, Linux

Testing & API: JUnit 5, Mockito, Postman, REST / RESTful Web Services

Architecture & Security: Microservice Design Patterns, Event-Driven Architecture, JWT, OAuth 2.0

AI-Assisted Engineering: Claude (agentic coding & debugging workflows), GitHub Copilot

EXPERIENCE

Engineer, Full Stack Java Developer (C2H) — November 2025 – Present

Forvia Hella

- Architecting and building a new internal tool using **Java 21, Spring MVC, and React JS** to support enterprise project and automation workflows.
- Migrated legacy **Java 8/Vaadin** modules to **Java 21** and hibernate, reducing build time by **60%** and eliminating 4 legacy dependencies.
- Designed and developed 5 microservices with efficient inter-service communication, and reduced the latency by 40% for API calls.
- Applied **Claude** in agentic development workflows to reduce microservice boilerplate and debug Kafka issues
- Implemented **BFF-based authentication** and session management, delivered a **Material UI** dashboard with sidebar navigation, and configured **Nginx** as a reverse proxy for deployment.

Java Developer Intern — December 2024 – November 2025

Forvia Hella

- Built and improved **React JS** frontend features for Forvia Hella's internal ERP system against sprint story points.
- Indexed key **Oracle** queries, reducing query execution time by **~25%**.
- Monitored application health via **GitLab CI/CD** logs, resolving bottlenecks that informed later **Redis** caching.
- Integrated **Playwright** automation for automated downloading of library files over Vendor Websites.

PERSONAL PROJECTS

VeraFlow — Fin Operations and Risk Platform — January 2026 – July 2026

Tech Stack: Java, Spring Boot, PostgreSQL, Angular, Kafka, Redis, Docker | GitHub Link:

- Designed a **KYC/AML compliance and transaction-risk platform** modelled on banking workflows and scalable system design, with JWT authentication, BFF-based authorization, and Redis caching across distributed microservices.
- Built a real-time **Kafka risk-scoring pipeline** evaluating transactions on amount, velocity, behavioural, and counterparty rules.
- Built a **double-entry ledger engine** with a fault-tolerant state machine (INITIATED → PROCESSING → COMPLETED/FAILED), ensuring idempotent handling and recovery from partial failures.
- Built an officer monitoring dashboard and automated report generation module for compliance reporting and audit visibility.
- Implemented the **Transactional Outbox Pattern** to reliably publish transaction and risk events after successful database commits, preventing **event loss and inconsistent state** across services.

EDUCATION

Master of Computer Science — PES Modern College, Pune — CGPA: 9.13 (2022–2024)

Bachelor of Computer Science — PVG College of Science, Pune — CGPA: 8.1 (2019–2022)

CERTIFICATIONS

- AWS Academy Graduate — AWS Academy (2023)
